

**TOWARDS A DISRUPTIVE CYBERSECURITY ORGANIZATION IN THE
BOLIVARIAN REPUBLIC OF VENEZUELA.****ABSTRACT**

This article, presents the advances of research that aims to analyze the implications of a disruptive organization on cybersecurity of the Bolivarian Republic of Venezuela. It is a study of documentary approach for which it was necessary to review materials and documents in this object of study. In an increasingly globalized context, a new area called cyberspace emerges. This has become the new battleground par excellence to realize the great strategy of the 21st century announced by the United States in the past decade, which involves bending the enemy with the lowest cost, the shortest time and with the least possible casualties. With this slogan, new threats associated with cyberspace arise, a new battleground, borderless and asymmetrical, that demands from nation states regardless of their size or ideology, to have a highly adaptive national organization and strategy cybersecurity. Concluding ideas are the need for a guiding organization to design and implement defensive and offensive cybersecurity strategies in the face of atomization and inability to adapt the ecosystem detecting, neutralizing and recovering the operability of the Venezuelan State's critical infrastructures in the face of latent risks in cyberspace.

Key Words: Security, cyberspace, cybersecurity, critical infrastructure, National Cyber Command.
